

● **Lamson
Litespeed
Hard Alox**

The Lamson Litespeed Hard Alox™ is a true large arbor reel with the same fully-sealed drag system that is used in the Waterworks ULA. Like the ULA, the Litespeed Alox is machined in the U.S. from barstock aluminum. By utilizing a more traditional structural design and foregoing the use of titanium we are able to offer a very fine, high performance large arbor reel at a value you would expect from Lamson. Lighter without sacrificing strength, the new Lightspeed Hard Alox will come in a close second to a corresponding Force reel in terms of retrieve rate and weight, and each shares our patented maintenance-free super smooth conical drag.

● **Lamson
Velocity
Hard Alox**

Years ago, Lamson® was the first high-quality, fully machined reel at a great value. We are proud to offer the Lamson Velocity Hard Alox,™ extending this tradition by incorporating leading-edge technology into a fully-machined reel. The Velocity is a large-arbor workhorse with a conventional frame. The porting on the spool offers increased ventilation and reduced weight. Equipped with a fully machined one-piece spool and our sealed conical drag, Velocity Hard Alox extends the Lamson tradition of value to a reel which represents a winning combination of leading edge technology and maintenance-free performance at a modest price.

● Lamson Radius

Radius™ is a fully-machined reel that, for the first time, brings top quality and performance to the affordable price range. Equipped with the Waterworks zero-maintenance conical drag, but with a smaller overall diameter and smaller arbor than our other reels, we're able to bring the core technology and craftsmanship of our more expensive reels to the fly fisher on a budget.

Our Design Philosophy

“Product design is the marriage of materials science and engineering with vision, creativity and art. It is the pursuit of product perfection through superior performance, simplicity and grace.

It was a passion for product design combined with a love for sport that formed our company. The Waterworks-Lamson is unique among fly fishing companies. We are not a machine shop selling reels, we are not a marketing company importing products from overseas. Our focus is exclusively on fly fishing products, our expertise and experience is in product design, and we are committed to the highest standards of domestic manufacturing.

Our products uniquely reflect our drive for superior design. For us this means they must embody true innovation and meaningful improvement. You won't see The Waterworks marketing "just another fly reel" or a "me-too" accessory. If we can't do it better, we won't do it at all.

Making great products also requires a commitment to flawless manufacturing quality. From the Grade 5 titanium, the heat-treated 6020 aluminum alloy and the 544 bearing bronze we use in our reels, to the carbon thermo-composite we mold into the Ketchum Release, each material selection is made without a hint of compromise. The state-of-the-art manufacturing techniques and processes we employ result in the highest possible standards of precision, finish and function. And, of course, we extend our commitment to quality by offering personal assistance to our dealers and our customers throughout the lifetime of the product.

We thank you for your interest in our products, and we look forward to being a part of your passion for the sport.” - The Waterworks-Lamson company.
