

HELIOS

Here at Okuma we continue to develop the most technological advancements in fishing tackle without compromising performance or value. Those were our thoughts when we decided to build the ultimate fly reel, the **Helios** series. This machined aluminum frame and spool fit the demands of the most experienced fly fisherman. It's multi-disk waterproof drag and one way clutch bearing make this the jewel of the highly regarded Okuma lineup of fly reels. Available in five sizes.

Helios Features:

- Maintenance-free waterproof drag system
- Multi-disk cork and stainless drag washers
- Roller bearing engages drag in one direction
- 2BB + 1RB stainless steel bearing drive system
- Precision machined stainless steel spool shafts
- Anodized aluminum Machined Rigid Frame
- Machined aluminum large arbor spool design
- Non-slip positive grip rubberized handle knobs
- Easy to change left to right hand retrieval conversion
- 7/8 and 8/9 reels with full caged frame system

Integrity Okuma's large arbor design gives faster line retrieval for a single action reel. Traditionally known as a specialty reel, large arbor reels have been fished by the specialists. With the introduction of the **Integrity** Okuma opens up to the world of large arbor fishing. The Integrity series features a uniquely patented, oversized stainless steel-based disc drag. The amazing drag has little to no initial resistance with incredible high-end drag pressure. The drag is controlled by an oversized roller bearing allowing for drag free retrievals.

Integrity Features:

- 5/6 & 7/8 with multi-disk Ruilidium drag washers
- 8/9 & 10/11 with multi-disk cork drag washers
- Roller bearing engages drag in one direction
- Precision machined brass bushing drive system
- Precision machined stainless steel spool shafts
- ALC: Alumilite diecast aluminum frame design
- Diecast aluminum super large arbor spool design
- Easy to change left to right hand retrieval conversion

Magnitude

Inspiringly light! the ultra-light **Magnitude** series is one of the world's only magnesium fly reels. This fresh-water range of both traditional and large arbor reels weighs in at about half of it's aluminum counterparts. The cast magnesium reels are treated with a four-coat finishing process for a durable and elegant powdercoat finish.

The MD range of traditional disc drags uses our venerable stainless steel and Teflon disc drag system. The drag is controlled by a one-way roller bearing which allows for drag free retrievals.

The ML range of large arbor reels feature Okuma's patented overbuilt, oversized stainless steel based disc drag. This amazing drag has little to no initial resistance with incredible high-end drag pressure. Again, the drag is controlled by an oversized roller bearing allowing for drag free retrievals.

Magnitude Features:

- Multi-disk Rulidium or Teflon drag washers
- Roller bearing engages drag in one direction
- Precision machined brass bushing drive system
- Precision machined stainless steel spool shafts
- Lightweight magnesium frame and spool design
- Both larger arbor and standard arbor spool designs
- Easy to change left to right hand retrieval conversion

Cascade

Okuma's new large arbor design gives faster line retrieval for a single action reel. The **Cascade** graphite large arbor reels offer incredible value in the traditionally exclusive world of large arbor reels. The Cascade uses the same one-way roller bearing technology found on the higher-end reels allowing for drag free retrievals. Costing no more than a few wooly buggers the Cascade is a great starter reel for a first foray into large arbor fishing or an extra all-arounder.

Cascade features:

- Fully adjustable multi-disk drag system
- Roller bearing engages drag in one direction
- Precision machined stainless steel spool shafts
- Super lightweight graphite frame construction
- Corrosion resistant super large arbor spool design
- Easy to change left to right hand retrieval conversion

SIERRA

Okuma has set the standard for what can be expected from a starter fly reel. Whether for a first time fly angler or a river guide looking for something new, the **Sierra** and Carina series offer quality fly reels at incredible prices.

Sierra features:

- Fully adjustable Teflon and stainless drag system
- Roller bearing engages drag in one direction
- Precision machined brass bushing drive system
- Precision machined stainless steel spool shafts
- ALC: Alumilite diecast aluminum frame design
- Diecast aluminum standard arbor spool design
- Easy to change left to right had retrieval conversion
